

APPENDIX H

METERING AND MONITORING PROTOCOLS

(Bound under separate cover)

APPENDIX H METERING AND MONITORING PROTOCOLS

The National Association of Energy Service Companies' (NAESCO) standards for metering and monitoring are adopted as interim protocols subject to (1) adjustments made to baseline energy use to reflect equipment or building minimum standards and (2) adjustments to gross savings consistent with the protocols. The utilities should employ the following adjusted NAESCO standards when doing so is cost-effective relative to the employment of other measurement approaches provided for under the protocols. CADMAC will consider refinements and improvements to metering and monitoring standards as part of the statewide study efforts. Any proposals for modification must be presented before the Commission for review and final adoption in an AEAP.
