1. INTRODUCTION

This is one of a series of quarterly reports produced by the statewide Market Characterization and Program Activity Tracking (MCPAT) Study. The MCPAT Study tracks trends in both the nonresidential new construction (NRNC) market, and in the Savings By Design statewide NRNC program, in years 2000 - 2001.

The Savings By Design (SBD) statewide NRNC program, currently implemented by the three California electric investor-owned utilities (IOUs) PG&E, SCE, and SDG&E, is designed to transform energy-efficiency investment behavior in the commercial construction market. The program seeks to change the design practice of professionals in the construction industry by promoting the understanding and use of energy efficient and integrated design techniques in commercial building construction; to increase awareness of building owners of the benefits associated with integrated designs; and to increase the penetration of energy efficient materials, equipment, and systems in the commercial building market.

The SBD program targets specific links in the commercial building construction decision-making chain, reflecting differences in design activities and priorities between large and small buildings and various occupancies. The Whole Building Approach is used for complex projects where the design team can work closely to integrate the energy systems. The Systems Approach is used for projects where design of the energy systems is done at different phases: where one energy system predominates, where intervention occurs late in the design, or for buildings with simple system interactions.

Within the SBD program, “new construction” program elements address the commercial new construction market segments, including the public, private, and speculative markets. Remodeling and renovation (“R&R”) program elements address the commercial remodeling and renovation market segments specific to “gut-rehabilitation” and tenant improvement projects, including the public, private, and speculative markets.

The MCPAT Study conducts the NRNC market characterization using two sources of information. The F.W. Dodge Reports provide detailed project information on construction projects that have *started* within a given time period (e.g. a quarter): title and location of project, type of project (new, addition or alteration), type of building under construction, area (square feet) of new or added space, project cost (valuation), and contact information (owner, architect, engineer, contractor, as available). Appendix A contains a glossary of building types tracked by F.W. Dodge.

Regarding project types, F.W. Dodge makes a clear distinction between new/addition projects, in which new building area is produced, and alteration projects (which include remodeling, renovation, tenant improvement, and retrofit projects). Even though the SBD program excludes retrofit projects from its R&R element, the F.W. Dodge alteration data are

still the best source of information available regarding the commercial R&R construction market.

The Construction Industry Research Board (CIRB) database records building permit data from the more than 515 city and county building departments in California. The CIRB tracks monthly data by county and building type, describing permit value. While these data are not as complete as the F.W. Dodge Reports, they provide a framework for the value of commercial projects in California that start construction in each quarter.

It must be noted that there are differences between the *permit* valuation reported by CIRB and the *project start* valuation reported by F.W. Dodge. Some of these differences are attributable to the time delay that naturally occurs between permit filing and construction start. Others are attributable to the fact that F.W. Dodge records publicly-bid projects, while some projects do not go to public bid.

Regarding project types, CIRB records new construction by building type, and clearly separates it from additions and alterations. Additions and alterations are grouped together, without an indication regarding building type. Furthermore, CIRB records only building-related projects, while leaving out permits for heating, HVAC, electrical, and other remodeling/renovation projects. Appendix B contains a glossary of building/project types recorded by CIRB.

This quarterly report is structured as follows. Chapter 2 characterizes the NRNC market in Quarter 1, 2000, as described by the Construction Industry Research Board and F.W. Dodge. It then draws on the Savings By Design program participation databases maintained by the three California electric investor-owned utilities (IOUs) PG&E, SCE, and SDG&E, to track the characteristics of new construction program participants in Quarter 1, 2000.

Chapter 3 presents the market characteristics for alteration projects, as described by F.W. Dodge. It then characterizes program participation activities in Quarter 1, 2000 for the renovation/remodel/first tenant improvement (R&R) element of the SBD program.

Chapter 4 contains an evaluation of SBD program penetration into the market in the First Quarter of 2000.

Chapter 5 summarizes quarterly market and SBD participation data, as well as estimates for the SBD program penetration into the market since program inception in July 1999.

Chapter 6 presents the most active market actors (architects and engineers) in Quarter 1, 2000.

2. STATEWIDE NONRESIDENTIAL NEW CONSTRUCTION TRENDS

This chapter presents information on the nonresidential new construction activity that has occurred in Quarter 1, 2000, in the State of California. The first section covers the total valuation, the number of project starts, and the total square footage of new construction projects by county. To verify the completeness of F.W. Dodge data, the section starts with a table summarizing the value of permits filed in Quarter 1, 2000, as reported by the CIRB.

The second section analyzes the Savings By Design (SBD) program activity for new construction projects for which the IOUs have committed funds in Quarter 1, 2000.

2.1 NEW CONSTRUCTION MARKET CHARACTERISTICS IN QUARTER 1, 2000

The following tables summarize market activity by building segment and county, in terms of valuation, number of permits, and square feet. When summarizing the market activity by utility territory, project zip codes were used in conjunction with California Energy Commission's zip code-to-utility territory mapping to allocate projects to IOU and non-IOU utilities. Such a mapping was not possible in the case of CIRB data, because CIRB data are summarized at city and county level (project zip codes are not available). Appendix C contains a short description of the CEC zip code-to-utility territory mapping.

Table 2.1 summarizes the value of nonresidential permits filed during Quarter 1, 2000, as reported by the Construction Industry Research Board (CIRB). Note that CIRB reports addition and alteration projects combined, separately from new construction. CIRB data indicate that Los Angeles, Orange, San Bernardino, and Santa Clara Counties account for the highest value of permits filed in the State during Quarter 1, 2000. Among building types, the highest permit value was recorded in the retail, industrial, and office segments.

Table 2.2 presents the F.W. Dodge valuation for nonresidential new construction projects that have started construction during Quarter 1, 2000. To emulate SBD program scope as closely as possible, additions reported by F.W. Dodge were included with "new construction". Los Angeles, San Bernardino, San Diego, and Santa Clara Counties account for the highest value of projects that have started construction in Quarter 1, 2000.

Table 2.3 shows the number of nonresidential new construction projects (including additions) that have started construction during Quarter 1, 2000, as reported by F.W. Dodge. Los Angeles, San Diego, Orange, and Riverside Counties have the highest number of new construction project starts. Among building types, office, retail, and storage account for the highest number of new construction project starts.

Table 2.4 presents the number of square feet of nonresidential new construction projects (including additions) that have started construction during Quarter 1, 2000, as reported by F.W. Dodge. The counties with the largest number of square feet attributable to new project starts are Los Angeles, San Bernardino, San Diego, and Riverside.

2.2 SBD NEW CONSTRUCTION PROGRAM PARTICIPATION IN QUARTER 1, 2000

The following pages summarize SBD program activity for nonresidential new construction participants for whom the IOUs have committed funds in Quarter 1, 2000. Program commitment indicates that the customer has filed an application, that the utility has reviewed it and found that it fits within the scope of the SBD program, and that an agreement was signed between the utility and the customer, detailing the conditions of participation in the program. Program commitment was established using the following dates from the tracking systems maintained by the IOUs: the “coupon issue date” for SCE participants, the “acceptance date” for PG&E participants, and the “sign date” for SDG&E participants.

The following pages summarize program participation by building type or measure. Participation is shown for the whole building approach and the systems approach separately.

Table 2.5 presents the number of new construction nonresidential participants to the SBD program for which funds were committed in Quarter 1, 2000.

Table 2.6 shows the number of square feet of new construction committed in Quarter 1, 2000.

Table 2.7 presents estimated annual MWh savings attributable to new construction measures committed in Quarter 1, 2000.

Table 2.8 summarizes the estimated annual MWh savings by measure type, in new construction committed in Quarter 1, 2000. A glossary of the measures is presented in Appendix D.

Among measures, the whole building design and daylighting account for most of the committed MWh savings in new construction.

3. STATEWIDE NONRESIDENTIAL ALTERATION (R&R) TRENDS

This chapter summarizes the nonresidential alterations that have occurred in Quarter 1, 2000 in the State of California. Similar to Chapter 2, the first section will present the total valuation and the number of project starts of alteration projects by county (F.W. Dodge does not track square feet for alteration projects.) The second section will present the SBD program activity for tenant improvement, renovation and remodeling projects (R&R) in Quarter 1, 2000.

3.1 ALTERATION (R&R) MARKET CHARACTERISTICS IN QUARTER 1, 2000

The following tables present the alteration market activity by building segment and county in Quarter 1, 2000. When summarizing market activity by utility territory, project zip codes were used in conjunction with California Energy Commission's zip code-to-utility territory mapping to allocate projects to IOU and non-IOU utilities.

Table 3.1 presents the F.W. Dodge valuation for the nonresidential alteration projects that have started construction during Quarter 1, 2000. The valuation reported by F.W. Dodge is roughly half of that reported by CIRB (Table 2.1). One explanation is that CIRB categorizes additions as alteration projects. Another is that CIRB records only building-related projects, while leaving out permits for heating, HVAC, electrical, and other remodeling/renovation projects.

The F.W. Dodge data indicate that the counties with the most active alteration activity in terms of valuation are Los Angeles, San Diego, Santa Clara, and Orange. Among building types, office, school and retail account for the highest value of alteration projects that have started construction in Quarter 1, 2000.

Table 3.2 summarizes the number of nonresidential alteration projects that have started construction during Quarter 1, 2000. The counties with the largest number of alteration project starts are Los Angeles, San Diego, Orange, and San Francisco. Among building types, the office, retail, and school segments account for the highest number of alteration project starts.

3.2 SBD R&R PROGRAM PARTICIPATION IN QUARTER 1, 2000

This section summarizes SBD program activity for nonresidential customers that have a first tenant improvement/renovation/remodel project (R&R customers), and for whom the IOUs have committed funds in Quarter 1, 2000. Program commitment indicates that the customer has filed an application, that the utility has reviewed it and found that it fits within the scope of the SBD program, and that an agreement was signed between the utility and the customer, detailing the conditions of participation in the program. Program commitment was established using the following dates from the tracking systems maintained by the IOUs: the “coupon issue date” for SCE participants, the “acceptance date” for PG&E participants, and the “sign date” for SDG&E participants.

Table 3.3 presents the number of nonresidential R&R participants to the SBD program for which funds were committed in Quarter 1, 2000.

Table 3.4 shows the number of square feet of R&R construction committed as of Quarter 1, 2000.

Table 3.5 presents the estimated annual MWh savings attributable to R&R measures committed in Quarter 1, 2000.

Table 3.6 summarizes the estimated annual MWh savings by measure type, in R&R projects committed in Quarter 1, 2000. A glossary of the measures is presented in Appendix D.

**Table 3.3. Number of Nonresidential R&R SBD Participants
in Quarter 1, 2000**

	AMUSEMENT	ASSEMBLY	EDUCATION	GOVT	HOTEL	MEDICAL	OFFICE	RETAIL	SCHOOL	SERVICE	STORAGE	OTHER	TOTAL

Total	.	1	.	.	1	.	3	.	14	.	.	.	19

The number of R&R participants is slightly larger than that of new construction SBD participants. The school and office building types are the largest segments participating in the program, which is consistent with the market data presented in Table 3.2.

**Table 3.4. Area for Nonresidential R&R SBD Participants

Among measures, chillers account for the highest MWh savings, followed by lighting and package HVAC.

4. SBD PROGRAM PENETRATION INTO THE NRNC MARKET IN QUARTER 1, 2000

This chapter presents SBD program penetration into the NRNC market statewide, as well as by utility territory, in Quarter 1, 2000.

Program penetration for new construction participants was evaluated based on both construction area (square feet) and number of projects. As the area of alteration projects is not tracked by F.W. Dodge, program penetration for R&R participants was evaluated only based on number of projects.

When summarizing market activity by utility territory, project zip codes were used in conjunction with California Energy Commission's zip code-to-utility territory mapping to allocate projects to IOU and non-IOU utilities.

Table 4.1 presents the statewide SBD program participation.

Table 4.2 presents SBD program participation in the SCE service territory.

Table 4.3 shows SBD program participation in the PG&E service territory.

Table 4.4 summarizes SBD program participation in the SDG&E service territory.

In terms of square feet committed, the statewide new construction market penetration of the SBD program is 4.2%. This number is lower than in individual utility territories due to the fact that non-IOU areas are included in the statewide market. SBD committed square feet account for 5.6% market penetration in the SCE territory; 0.5% penetration in the PG&E territory; 12.0% penetration in the SDG&E territory.

In terms of number of projects committed, the statewide new construction market penetration of the SBD program is 1.6%. SBD committed projects account for 1.9% market penetration in the SCE territory; 0.3% penetration in the PG&E territory; 7.1% penetration in the SDG&E territory.

Among R&R participants, the statewide market penetration of the SBD program is 2.6%. SBD committed projects account for 1.6% market penetration in the SCE territory; 0.7% penetration in the PG&E territory; 13.6% penetration in the SDG&E territory.

5. NRNC MARKET AND PROGRAM TRACKING SUMMARY

This chapter provides a summary of the NRNC market and SBD program activities from SBD program inception (July 1999).

Tables 5.1 – 5.4 summarize the market activities quarterly, statewide and by utility territory, starting with Quarter 3, 1999. Consistent with the data reported the previous chapters, F.W. Dodge project zip codes were used in conjunction with California Energy Commission's zip code-to-utility territory mapping to allocate projects to IOU and non-IOU utilities.

The market activity does not vary much from quarter to quarter. Quarter 3, 1999, presents the largest volume of activity, while Quarter 4, 1999, presents the lowest volume of activity, consistently statewide, and across utility territories.

Tables 5.5 – 5.8 summarize the SBD program activities quarterly, statewide and by utility territory, starting with Quarter 3, 1999.

Tables 5.9-5.12 summarize the SBD program penetration quarterly, statewide and by utility territory, starting with Quarter 3, 1999.

The SBD program activity generally indicates a decrease of participation in Quarter 1, 2000, as compared to Quarters 3 and 4, 1999.

Table 5.1 Market Summary for Project Starts in California

6. MOST ACTIVE MARKET PLAYERS IN QUARTER 1, 2000

This chapter presents the most active market players in Quarter 1, 2000, by utility territory and statewide, as reported in the F.W. Dodge “Players” database. The most active market players are defined as the actors who contributed to projects that added up to the highest total value.

Our experience with the F.W. Dodge Reports indicates that, while most projects are associated with at least one market actor, that actor is not necessarily an architect or an engineer (the F.W. Dodge database also tracks owners and contractors). The data reported below are therefore subject to the limitations intrinsic to reporting within the F.W. Dodge Reports.

In preparing these results, all entries containing the same address, zip code, and similar names for the market actors, were considered to correspond to the same firm. Civil engineering, structural engineering, and landscape architecture firms were excluded only if their name included the words “civil”, “structural” or “landscape” (the F.W. Dodge database does not contain information regarding the specialty of an actor).

The mapping of market actors by utility service territory was done using the zip code associated with the *project* location, not that associated with the address of the *market actor*.

Table 6.1 presents the most active market players statewide, during Quarter 1, 2000.

Table 6.2 presents the most active market players in SCE territory during Quarter 1, 2000.

Table 6.3 shows the most active market players in PG&E territory during Quarter 1, 2000.

Table 6.4 summarizes the most active market players in SDG&E territory during Quarter 1, 2000.

APPENDIX A. GLOSSARY OF BUILDING TYPES RECORDED BY F.W. DODGE

Amusement	amusement and recreational buildings
Assembly	religious and worship buildings
Education	libraries, museums
Government	government services
Hotel	hotels and motels
Medical	hospitals and other health-related buildings
Office	office and laboratory buildings
Retail	retail stores and shopping centers
School	schools, colleges and universities, including dorms
Service	service stations
Storage	warehouses and storage facilities
Other	other nonresidential buildings

APPENDIX B. GLOSSARY OF BUILDING/PROJECT TYPES RECORDED BY CIRB

Amusement	amusement and recreational buildings
Church	churches and religious buildings
Hotel	hotels and motels
Medical	hospitals and institutional buildings
Office	office and bank buildings
Other	other nonresidential buildings
Education	schools, colleges, universities, libraries, museums
Retail	stores and other mercantile buildings
Service	service stations
Industrial	manufacturing plants and affiliated buildings
Alterations	alterations, additions, and conversions to nonresidential structures (excludes special installation permits for electrical, plumbing, heating, AC, or similar mechanical work, or installation of fire escapes, elevators, signs, etc.)

APPENDIX C. CEC ZIP CODE-TO-UTILITY TERRITORY MAPPING

California Energy Commission's zip code-to-utility territory mapping consists of a list of 2,671 zip codes corresponding to 1,410 cities in California. In this list, each zip code is mapped to one of 16 territory zones. In turn, the territory zones correspond to utility territories as follows.

Zones 1 – 5 are in PG&E territory

Zone 6 is in SMUD territory

Zones 7 – 10 are in SCE territory

Zones 11 and 12 are in LADWP territory

Zone 13 is in SDG&E territory

Zones 14 – 16 comprise the Other Service area

To identify the utility territory based on zip code, the zip code must be first used to identify the territory zone, which then corresponds to a utility territory.

Note that the territory zones defined for this purpose by the CEC are not the same as the California Climate Zones.

APPENDIX D. GLOSSARY OF MEASURES IMPLEMENTED BY SBD PARTICIPANTS

Whole building	Measures installed as part of the whole building approach
Daylighting	Daylighting measures
Skylight	Skylights
HVAC chiller	High-efficiency chillers
HVAC package	High-efficiency unitary systems
HVAC controls	Controls for HVAC systems
HVAC other	Other measures labeled as "HVAC"
Motors "motors"	High-efficiency motors and other measures labeled as "motors"
Lighting	Lighting measures, including lighting power density reduction
Envelope	Envelope measures, including insulation and windows
Other	Refrigeration, process cooling and pumps, variable frequency drives and adjustable speed drives that are not specifically labeled "HVAC" or "motors", controls that are not specifically labeled "HVAC" or "motors", and measures labeled "other" or "miscellaneous".
