Pacific Gas and Electric Company  
San Francisco, California

**Disclaimer of Warranties and Limitation of Liabilities**

As part of its Customer Energy Efficiency Programs, Pacific Gas and Electric Company (PG&E) has engaged consultants to conduct a series of studies designed to increase the certainty of and confidence in the energy savings delivered by the programs. This report describes one of those studies. It represents the findings and views of the consultant employed to conduct the study and not of PG&E itself.

Furthermore, the results of the study may be applicable only to the unique geographic, meteorological, cultural, and social circumstances existing within PG&E's service area during the time frame of the study. PG&E and its employees expressly disclaim any responsibility or liability for any use of the report or any information, method, process, results or similar item contained in the report for any circumstances other than the unique circumstances existing in PG&E's service area and any other circumstances described within the parameters of the study.

Inquiries should be directed to:

**EVALUATION OF  
PACIFIC GAS & ELECTRIC COMPANY'S  
1996 POWER SAVING PARTNERS PROGRAM  
FOR ALL TECHNOLOGIES**

*PG&E Study ID number: 396a-f*

**Purpose of Study**

This study was conducted in compliance with the requirements specified in "Protocols and Procedures for the Verification of Costs, Benefits, and Shareholders Earnings from Demand-Side Management Programs", as adopted by California Public Utilities Commission Decision 93-05-063, revised January, 1997, pursuant to Decisions 94-05-063, 94-10-059, 94-12-021, 95-12-054, and 96-12-079.

This study evaluated the gross and net energy savings from each of the following energy efficiency technologies for which rebates were paid in 1996 by Pacific Gas & Electric Company's Power Saving Partners (PSP) program.

- Residential Lighting: 396a
- Commercial Lighting: 396b
- Industrial Process: 396c
- Commercial HVAC: 396d
- Commercial Refrigeration: 396e
- Residential Gas Boilers: 396f

**Methodology**

The M&V plans are consistent with the Measurement and Evaluation (M&E) protocols adopted by the Commission. The commission emphasized in Decision 93-05-063, p. 75:

Payments to winning bidders do not need to be linked to the completion of specific ex-post measurement studies in the same manner as utility earnings. The utilities are expected to apply the basic concepts...., but to allow reasonable differences between these protocols and bidders' measurement plans and payment schedules.

PG&E has fully complied with the Commission ruling and actually created a rigorous energy verification plan as accurate for site-specific savings measurement as the Protocols used for utility programs.

PG&E developed the PSP DSM Measurement and Verification Procedures Manual (Manual) following the directions in Appendix H of the Measurement Protocols adopted in D. 94-05-063. That is, the 1993 NAESCO protocols were adapted to California conditions (e.g. use of Title 24 baselines where appropriate) and made more rigorous.

The PSP contract specifies that participants submit the results of monitoring data for each site, this data is used to revise savings estimates and corresponding payments yearly and is submitted for review in this report.

### **Study Results**

The results of the analyses are summarized below:

PARTICIPANT	TOTAL SAVINGS		
	SAVINGS (\$)	NUMBER OF SITES	NUMBER OF PAYMENTS
<b>PRE-ANNUALIZATION</b>			
Power Saving Partners	49,231,720	7,090	106,229
<b>POST-ANNUALIZATION</b>			
Power Saving Partners	53,047,165	7,073	106,229
<b>REALIZATION RATES</b>			
Power Saving Partners	1.08	1.00	1.00

### **Regulatory Waivers and Filing Variances**

The Appendices of this report contain confidential customer information and are submitted as such under CPUC Code Section 583.

**Invoices/Savings Summaries and True Up Reports by Partner**

1.Executive Summary

The following evaluation documents savings measured in program year 1996 for Pacific Gas & Electric's PowerSaving Partners (PSP) Program. This study verifies both kWh, kW and therm savings for the end uses installed in 1996 and claimed in the 1996 AEAP Earnings Claim, specifically:

- Commercial Lighting
- Industrial Process
- Residential Lighting
- Commercial HVAC
- Commercial Refrigeration
- Residential Gas Boilers

This study documents the original claim, how it was constructed and the results of a thorough and rigorous monitoring study made by each of the PSP Partners and evaluated by PG&E. PSP Partners are required to sample and meter all sites where measures are installed in order to receive payment for energy savings. This report tabulates the results of their findings and presents the basis for each realization rate claim.

For PSP 1996 program accomplishments, PG&E claimed 7,090 kW and 49,232 mWh of annual energy savings. These accomplishments were included in the industrial, residential and commercial portfolios. Table 1 lists the results of the Measurement and Verification for these contracts by program end use.

PACIFIC GAS AND ELECTRIC COMPANY  
TABLE 1

## 2.

### Background

In March 1992, the CPUC mandated that PG&E implement a bidding pilot program of DSM resources (D.92-03-038). In good faith, PG&E conducted an auction and announced a short list of winning bidders April 1993. The CPUC found all contracts to be reasonable in Decisions 93-11-067, 94-04-039 and 95-10-037. Energy savings from the bidding pilot were included in PG&E 1996 AEAP earnings claim and approved in Decision 95-12-054.

All contracts are based on pay-for-performance over a contract life of 10 years. The Powersaving Partners (PSP or Partners) perform the measurement and verification, and savings are verified annually. The implementation period is 36 months with specific reporting requirements. Payments are based on savings projections and then reconciled according to actual verified savings after one year. If savings are not achieved, payments are modified and savings projections are reduced. A method for collecting overpayments, should they occur, is contained in each contract.

The M&V plans are consistent with the Measurement and Evaluation (M&E) protocols adopted by the Commission. The commission emphasized in Decision 93-05-063, p. 75:

Payments to winning bidders do not need to be linked to the completion of specific ex-post measurement studies in the same manner as utility earnings. The utilities are expected to apply the basic concepts....., but to allow reasonable differences between these protocols and bidders' measurement plans and payment schedules.

PG&E has fully complied with the Commission ruling and actually created a rigorous energy verification plan as accurate for site-specific savings measurement as the Protocols used for utility programs.

## 3.

### Measurement & Verification Methodology

A short discussion of the existing M&V requirement for each of the PSP partners will assist in explaining the methodology for this realization report.

PG&E developed the PSP DSM Measurement and Verification Procedures Manual (Manual) following the directions in Appendix H of the Measurement Protocols adopted in D. 94-05-063. That is, the 1993 NAESCO protocols were adapted to California conditions (e.g. use of Title 24 baselines where appropriate) and made more rigorous. The Manual was reviewed and in its final form agreed to by all the Partners. It was adopted in its entirety for the PSP contract with the State of California. The Manual covers all aspects of M&V of savings.

For the purpose of simplifying the M&V Procedures Manual the following list outlines the topics covered in detail:

- Common requirements and definitions;
- Submittal requirements for each project;
- M&V procedures for lighting efficiency and controls measures;
- M&V procedures for constant load motors;
- M&V procedures for variable load motors and HVAC measures;
- Maintenance and management plans; and
- Sample forms and report outlines.

Here is a short summary of the measurement strategy based on end use/control group.

a. Lighting Efficiency Measures

Starting with the most basic lighting efficiency retrofits, the verification strategy would be as follows: The Partner surveys the existing (baseline) and new (post-installation) conditions to include exact fixture count, lamps and ballast types and the identification of usage areas. Usage areas must be defined in a way that groups together areas that have similar lighting requirements (i.e., areas of comparable average operating hours as determined by the proportion of lights in operation during each of PG&E five costing periods). PG&E inspects both the existing and the new conditions for accuracy of fixture count and type and identification of usage areas. The measurement techniques employed for this measure after installation would be to use a table of standard wattage's to determine the kW per fixture for the pre- and post-installation conditions, as well as the determination of operating hours. The operating hours are determined by short-term metering of fixture on-time in the various costing periods. The short-term metering length is determined by market segment and ranges from one to four months. The required sample sizes for the metering are for 90 percent confidence and 10 percent precision. The majority of the measure installed by PSP in 1996 were lighting efficiency retrofits and the M&V followed by each and every Partner is as described above.

b. Lighting Controls and Constant Load Motors

The next category of projects are constant load and variable hour projects, such as lighting controls or motor efficiency retrofits. The verification strategies involve the survey of the existing measure for the load served, including a kW or horsepower measurement and a typical operating schedule. This verification survey includes spot-metering to determine actual demand, and possibly short-term metering of a sample to verify constant load and to normalize spot metering. The post-installation verification included spot metering to determine demand. The ongoing measurement activities for these types of measure include short-term metering for demand and run-hours. Again, the short-term metering length is determined by market segment and ranges from one to four months.

**c. Variable Load Projects**

The last type of projects are those that have variable loads and variable operating hours, including seasonal variation. For both verification and measurement, a comprehensive approach is necessary for variable load measure, multiple measures or measure that interact. In these cases, end-use measurements are difficult to isolate or are cost-prohibitive. A project-specific approach is necessary, including a variety of acceptable approaches from continuous metering to billing analysis. The Manual outlines both a continuous metering approach as well as pre- and post installation billing analysis.

**4. Realization Study Methodology**

The 1996 PG&E savings claim was comprised of savings from a total of 435 Application Codes or Sites. These Sites were aggregated by end use/sector and reported in the 1996 E tables. The following tables document the claimed and the actual measured savings for each Site.

**1996 Realization Rate by End Use/Study**

Tables 2-6, "Realization Rate by End Use/Study," lists a tracking code that represents each customer site, kW, kWh and therm savings as reported in the 1996 AEAP claim, and measured kW, kWh and therm savings as determined by analyzing metering and monitoring data. The realization rate is equal to the measured savings divided by the claimed savings. This table is sorted by end use for each required study. As many of the Res sites included both gas boiler measures and lighting measures, Table 2 contains summary information for both end uses.

**1996 Realization Rate by Partner**

Table 7, "1996 Realization Rate by Partner," lists the same information as Tables 2-6, however, each of the sites are sorted by participating partner corresponding to each section of the Appendix.

**Appendix**

The Appendix contains two sets of documents for each partner. There are eight partners that installed projects in 1996. The first half of each partner data section contains invoice data. The invoice data sheets incorporate the results of the metered data to produce revised estimates of kw, kwh and therm savings necessary for payment. For two of the partners, savings are listed in the other category. The Noresco contract allows for a 15% interactive savings for lighting due to reduction in HVAC load. The Princeton Development Corporation contract allows for a three percent interactive adder. These savings are as filed and approved in the original PSP contracts.

Each of the partners submitted usage data for their sites as required by the Manual. This information is based on the tabulation of actual monitored data from data loggers installed at each site or representative sample for similar sites. The data was analyzed by PG&E and a third Party, Schiller Associates, and upon approval, the revised hours of operation for each usage group were adopted for payment and incorporated into the invoices for the following year.

Database information has been filed electronically for this report. Database information is as documented in the data dictionary and includes information about the existing equipment and the retrofit equipment at each customer site and for each measure installed. After submittal of this information, at the request of PG&E, a third party inspects each site for accuracy. If the installation is approved, the Site tables are entered into PG&E's data files and a kW savings is recorded for each usage group and reported as maximum kW (connected load reduction). For the purposes of PSP, kW savings are average peak kw savings, that is, the total connected load multiplied by the ratio of hours of operation in the peak period divided by seven hundred seventy four (the maximum hours in a peak period based on the 1993 calendar year). The energy savings reported are the kw savings multiplied by the total hours of operation. Per the manual, the first year savings claim is based on engineering estimates. Each successive year saving claim is based on metered data gathered during the previous year.

## 5. Summary

PG&E has adhered to or exceeded the basic concepts of ex post measurement protocols by implementing the adjusted NAESCO standards for the first set of DSM bidding contracts. The kW, kWh and therm realization rates in this report link the savings measured at 435 sites to the values reported in the E-tables filed in support of PG&E's 1996 Earnings claim.

## **PROTOCOL TABLES 6 AND 7**

### **1996 POWER SAVING PARTNERS PROGRAM: COMMERCIAL SECTOR, INDUSTRIAL SECTOR, RESIDENTIAL SECTOR**

#### **PG&E STUDY ID #395a, 395b, 395c, 395d, 395e, 395f**

This section includes Tables 6 and 7 for the above referenced study as required under the "Protocols and Procedures for the Verification of Cost, Benefits, and Shareholder Earnings from Demand Side Management Programs" (the Protocols), as adopted by the California Public Utility Commission (CPUC) Decision 93-05-063, Revised January 1996 Pursuant to Decisions 94-05-063, 94-10-059, 94-12-021, and 95-12-054.

#### ***Table 6 Assumptions***

The Power Saving Partners (PSP) program sample consists solely of participants. Consequently, there is no comparison group. Since there is no comparison group, unit intermediate and market segment data is not necessary. In D. 92-03-038, the Commission determined that for PG&E's DSM bidding pilot, the net-to-gross ratio would be 1.0 for programs with greater than two-year payback. The default net-to-gross should be used for programs with less than a two-year payback. The measurement standards used in PSP meet or exceed NAESCO standards which uphold the 90/10 requirement mandated by CPUC protocols. Hence, all load impact estimates are at or above the 90% precision, 10% confidence interval.

Protocol Table 6

## **PROTOCOL TABLE 7**

### **REALIZATION STUDY OF 1996 POWER SAVING PARTNERS PROGRAM**

#### **PG&E STUDY ID #395a, 395b, 395c, 395d, 395e, 395f**

The purpose of this section is to provide the documentation for data quality and processing as required in Table 7 of the California Public Utility Commission (CPUC) Evaluation and Measurement Protocols (the Protocols). Although other important considerations are addressed throughout this section, major topics are organized and presented in the same order as they are listed in Table 7 for ease of reference and review. When responses to the items are discussed in detail elsewhere in the report, only a brief summary will be given in this section to avoid redundancy.

#### **A. OVERVIEW INFORMATION**

##### **1. Study Title and Study ID Number**

**Study Title:** Realization Study of 1996 Power Saving Partners Program

**Study ID Number:** #395a, 395b, 395c, 395d, 395e, 395f

##### **2. Program, Program Year and Program Description**

**Program:** PG&E Power Saving Partners Program: Commercial Sector, Industrial Sector, Residential Sector

**Program Year:** Rebates Received in the 1996 Calendar Year.

##### **Program Description:**

In March 1992, the CPUC mandated in D. 92-03-038 that PG&E implement a DSM resources bidding pilot program. PG&E conducted issued a Request for Proposal and contracted with winning bidders. The CPUC found all contracts to be reasonable in Decisions 93-11-067, 94-04-039 and 95-10-37.

All contracts are based on pay-for-performance over a contract life of up to 10 years. The PowerSaving Partners (PSP or Partners) perform the measurement and verification, and savings are verified annually. The implementation period is 36 months with specific reporting requirements. Payments are based on savings projections and then reconciled according to actual verified savings after one year. If savings are not achieved, payments are modified and savings projections are reduced. A method for collecting overpayments, should they occur, is contained in each contract.

There is a residential and nonresidential component of PG&E's PSP Program. Residential projects are primarily common area lighting and boiler retrofits. Nonresidential PSP projects range from facility audits and cost effectiveness evaluations to implementation, financing, and maintenance.

### ***3. End Uses and/or Measures Covered***

***End Use Covered:*** 1) commercial lighting; 2) industrial process; 3) residential lighting; 4) commercial hvac 5) residential gas boilers

***Measures Covered:*** Lighting equipment, lighting and boiler controls, variable speed drives, refrigeration controls.

### ***4. Methods and Models Used***

Per the PSP Manual, specific measures must adhere to unique measurement methods. These methods are fully documented in both the Blue Book and the Realization Study of 1996 Power Saving Partners Program.

### ***5. Participant and Comparison Group Definition***

The PSP sample consists solely of participants. Participants are all individuals and entities included within the program. Consequently, there is no comparison group.

### ***6. Analysis Sample Size***

The PSP program meters one hundred percent of program participants. In cases where a large homogenous population participates, the program may sample subject to the 90/10 sampling criteria.

## **B. DATABASE MANAGEMENT**

Database information consisting of equipment inventories of each participating site has been filed electronically for this report. Database information is as documented in the data dictionary included with the datafiles. There is no data kept with regards to characteristics of participant and nonparticipant groups.

### ***1. Data Description and Flow Chart***

Not Applicable

### ***2. Key Data Elements and Sources***

Not Applicable

### ***3. Data Attrition Process***

Not Applicable

**4. Internal Data Quality Procedures**

Not Applicable

**5. Unused Data Elements**

Not Applicable

**C. SAMPLING**

The PSP program does not sample because it meters one hundred percent of program participants.

**1. Sampling Procedures and Protocols**

Not Applicable

**2. Survey Information**

Not Applicable

**3. Statistical Descriptions**

Not Applicable

**D. DATA SCREENING AND ANALYSIS**

The PSP program does not adjust data since all program participants are metered and data samples are not used.

**1. Outliers, Missing Data and Weather Adjustment**

Not Applicable

**2. Background Variables**

Not Applicable

**3. Data Screen Process**

Not Applicable

**4. Regression Statistics**

Not Applicable

**5. Model Specification**

Not Applicable

**6. Measurement Errors**

Not Applicable

**7. Autocorrelation**

Not Applicable

**8. Heteroskedasticity**

Not Applicable

**9. Collinearity**

Not Applicable

**10. Influential Data Points**

Not Applicable

**11. Missing Data**

Not Applicable

**12. Precision**

Not Applicable

**E. DATA INTERPRETATION AND APPLICATION**

The PSP program does not adjust data since all program participants are metered and data samples are not used.

**Self Report Method**

Not applicable
